Kids Immunity Supplementation

Kids Immunity is a delicious immune support formula for children containing patented Wellmune® natural yeast beta-glucan derived from the cell wall of a highly purified, proprietary strain of baker's yeast (*Saccharomyces cerevisiae*).

Proper immune function is crucial in children, especially as they grow and mature. Children also tend to be at greater risk of foreign challenges due to activities like school, playing outside, and being in daycare. Kids Immunity is a great way to help kids—and adults—get the beta-glucan they need for healthy immune function in tasty chewable tablets the whole family can enjoy.♦

Benefits of supplementing with Kids Immunity may include:

- Supports healthy innate and adaptive immune responses♦
- Promotes respiratory health♦
- Supports healthy cellular function♦

How Kids Immunity Works

A large body of clinical research suggests that Wellmune® can help support children's natural immune responses and provide protection from health challenges arising from physical and lifestyle stress.♦¹ Despite being fungi, certain species of yeast have beneficial components for human health. In particular, baker's yeast (*Saccharomyces cerevisiae*) contains a unique polysaccharide called beta-glucan in its cell wall.

After ingestion, Wellmune® beta-glucan is taken up by immune cells in the gastrointestinal tract, transported to immune organs, and slowly released for days thereafter.♦ In vivo and human clinical trials have shown that Wellmune® supports both innate and adaptive immune responses in children by activating key immune cells like macrophages and neutrophils.♦^{2,3,4} This helps children respond more effectively to environmental challenges.♦

According to clinical research, children supplementing with Wellmune® reported 66% fewer upper respiratory tract infections and six fewer sick days over the course of 12 weeks than children taking a placebo.♦^{5,6} Another study showed children drinking a milk formula with Wellmune® experienced fewer episodes of allergy discomfort than children drinking unfortified milk.♦^{7,8} The beta-glucan in Wellmune® primes the immune system without overstimulation, supporting the body's natural defense mechanisms and ensuring the immune system is ready to act when needed.♦

How Kids Immunity Works Continued

Adults looking for immune resilience, especially during times of high stress, travel, or seasonal immune challenges, will find Kids Immunity to be an excellent daily immune-support option.*^{9,10} Its natural origin and safe, non-stimulatory action make it ideal for anyone seeking to maintain immune health without overstimulation or artificial ingredients.♦
